

The Webex Desk Unit Video Device Secure Case is a heavy-duty metal enclosure that protects the Cisco Webex Desk Unit from damage in demanding environments like prisons, detention facilities and secure medical facilities.

It is available with a heavy-duty handset and 32-inch armored cable or as a handsfree device using the speaker and microphones of the Webex Desk Unit. The Lexan panel can be field replaced if damaged. The screws holding the stainless steel front panel are security Torx type

Initiating, answering and hanging up a call

Calls can be originated by the Webex Desk Unit by programing it to dial a specific phone number when the handset is lifted.

Calls can be answered by several different methods:

- Auto answer - through the Webex Desk Unit's web interface it can be programmed to auto answer any inbound call.
 - In the handsfree version the user uses the speaker and the microphone of the Webex Desk Unit.
 - In the handset version, the Unit can also be set to automatically answer but audio will only be heard through the handset.
- Manual answer - the Webex Desk Unit will ring until the user picks up the handset. Audio is played through the handset.
 - In the handsfree mode, the call is hung up when the "far side" phone is hung up.
 - In the handset version, the call is hung up "near side" when the handset is hung up.

Notes

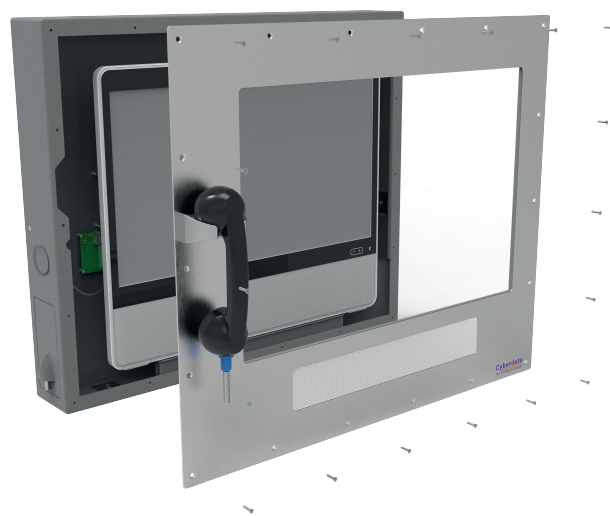

- The screen is protected with a sheet of Lexan plastic so the touch function is not available.
- Handset or handsfree volume control is available by accessing the Webex Desk Unit's web interface remotely.
- The Webex Desk Unit can not be shipped inside the case. The Unit needs to be installed at the site of operation.
- The power switch is accessible with a special tool, the Power Switch Access Pin, which is included.
